AMENDMENT "A"

Assistant Commissioner for Patents
Washington, D.C. 20231

Dear Sir:

In response to the Notice to File Corrected Application Papers, a copy of which is attached, please amend the above-identified application as follows:

IN THE ABSTRACT OF THE DISCLOSURE

Please delete the section of the specification entitled "ABSTRACT OF THE DISCLOSURE" and replace the deleted section by the ABSTRACT OF THE DISCLOSURE provided herewith on a separate sheet in accordance with 37 C.F.R. 1.72(b).

REMARKS

These remarks and the accompanying amendments are in response to the Notice to File Corrected Application Papers mailed February 14, 2001 (hereinafter referred to as "the Notice"). The Notice required an abstract not to exceed 150 words in length, commencing on a separate sheet. Accordingly, attached herewith is a separate sheet titled simply "ABSTRACT OF THE DISCLOSURE" in clean form in accordance with 37 C.F.R. 1.121. Also attached herewith is a separate sheet titled "VERSION MARKED UP TO SHOW CHANGES" which shows additions to the previous abstract using underlined text, and which shows deletions in strikeout text. The Examiner is invited to contact the undersigned should there be any further concern about the Abstract of the Disclosure.

Dated this 16th day of March, 2001.

Respectfully submitted,

ADRIAN J. LEE
Attorney for Applicants

ABSTRACT OF THE DISCLOSURE

~~The present invention is directed to a method and computer program product for~~
~~offloading specific processing tasks that would otherwise be performed in a computer system's~~
~~processor and memory, to a peripheral device, or devices, that are connected to the computer.~~
The computing task is then performed by the peripheral, thereby saving computer system
resources for other computing tasks and increasing the overall computing efficiency of the
computer system. In one preferred embodiment, the disclosed method is utilized in a layered
network model, wherein computing tasks that are typically performed in network applications
are instead offloaded to the network interface card (NIC) peripheral. ~~An application executing~~
~~on the computer system first queries the processing, or task offload capabilities of the NIC, and~~
~~then selectively enables those capabilities that may be subsequently needed by the application.~~
The specific processing capabilities of a NIC are made available by creating a task offload buffer
data structure, which contains data indicative of the processing capabilities of the corresponding
NIC. ~~Once an application has discerned the capabilities of a particular NIC, it will selectively~~
~~utilize any of the enabled task offload capabilities of the NIC by appending packet extension data~~
~~to the network data packet that is forwarded to the NIC. The device driver of the NIC will~~
~~review the data contained in the packet extension, and then cause the NIC to perform the~~
~~specified operating task(s). This offloading of computing tasks on a per packet basis allows an~~
~~application to selectively offload tasks on a dynamic, as needed basis. As such, applications~~
~~executing on the computer system processor are able to offload tasks in instances where it is~~
~~busy processing other computing tasks and processor overhead is high. Multiple tasks can also~~
~~be offloaded in batches to a particular peripheral.~~
